**Factors Considered in the Development of the Unit Staffing Plan  
(Check all that apply):**

Activity such as patient admissions, discharges, and transfers

The number of patients that have been placed on the schedule will allow the department to assign the appropriate number of nursing staff.

Patient acuity level, intensity of care needs, and the type of care to be delivered on each shift

Patient acuity is determined by our departmental acuity tool. Patients are scheduled to an individual nurse for the day. The number of patients a nurse may care for in a day varies on staff availability and patient level of acuity. Care ranges from injections to complex multi-drug chemo regimens.
